Brainstorming & Idea Prioritization

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

1. Brainstorming and idea listing

The project began with a simple observation: planning a multi-day trip means jumping between destination guides, activity lists, budget notes and date calculations, and the result is often generic or lost in scattered notes. The ideas below were considered for a travel-planning application.

No.	Idea / suggestion	Category	Feasibility	Importance
1	AI-generated personalised day-wise itinerary from destination, dates, interests, budget and pace	Generative AI	High	High
2	User accounts with save-and-revisit for planned trips	Web application / persistence	High	High
3	Edit preferences of an existing saved trip	Personalisation	High	High
4	Home page and planner form for destination discovery	UX / travel	High	High
5	Live booking and payment integration (flights, hotels, activities)	External services	Medium	Medium
6	Maps, route optimisation and live prices	External APIs	Medium	High
7	Export itinerary to PDF / shareable trip links	Utility	Medium	Medium

2. Idea prioritisation

Group	Final idea	Priority	Selected	Reason
1	Personalised itinerary generation (Groq AI via FastAPI)	High	Yes	Core value of the product
2	Authentication (Supabase Auth) and saved trips	High	Yes	Lets users return to their plans
3	Edit saved trip preferences	High	Yes	Supports iteration without starting over
4	PDF export, shareable links, map grouping, budget breakdown	Medium	Later	Valuable but not needed for the core workflow
5	Bookings, payments and live pricing	Later	No	Requires verified third-party integrations; outside current scope

Decision: deliver a working end-to-end travel-planning workflow first (sign in, generate, save, list, edit, persist). Booking, payment, live inventory and real-time pricing are explicitly out of scope for this version.
