Empathy Map

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

Target persona: independent traveller / trip organiser

Students, solo travellers, couples and families who want help structuring a trip but have limited time and incomplete destination knowledge.

SAYS • “I want a useful plan without spending hours researching.” • “I need to change the plan if my preferences change.” • “Show me what to do each day.”	**THINKS** • Will this fit my budget, interests and available days? • I do not want to lose the itinerary after refreshing or returning later. • I need a clear, readable plan rather than a long list of links.
DOES • Searches websites and social media for ideas • Compares activities and costs manually • Saves notes, screenshots or links	**FEELS** • Overwhelmed by too many choices • Concerned about budget and timing • Relieved when a structured plan is easy to revisit

Pains and gains

Pains	Gains
Fragmented research across many sources	One form turns preferences into a day-wise plan
Manual scheduling of activities	AI-generated first draft in seconds
Plans lost between sessions	Saved trips stored in the user's account
Rebuilding a plan when needs change	Edit saved preferences with values restored

Design implication

Keep the planner form understandable, show clear loading and error states, organise results by day, and preserve saved preferences so users can return to or edit a trip.
