Customer Journey Map

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

Stage	User action	User question / pain	System response	Success signal
Discover	Opens the travel planner	Can I plan my trip quickly?	Explains the product and presents planner entry	User starts planning
Sign in	Signs up or signs in	Is my account safe?	Supabase Auth creates / restores the session	Authenticated view appears
Plan	Enters destination, dates, budget, pace and interests	Which details are required?	Validates inputs and shows helpful errors	Valid request submitted
Generate	Requests itinerary	Is the system working?	Shows loading state; calls FastAPI generation endpoint; Groq creates the plan	Structured itinerary returned
Review	Reads day-wise itinerary	Does this fit my interests?	Displays activities and trip preferences	User reviews the plan
Save	Saves the trip	Will it be available later?	Persists trip to Supabase for the authenticated user	Trip appears in My Trips
Return / edit	Reopens or edits a saved trip	Will my previous values be restored?	Loads saved values into the planner	Changes can be saved; data survives refresh

Key experience requirements

- Communicate failures clearly (backend offline, AI provider error, expired session).
- Preserve the selected destination and saved preferences during navigation between home, planner and itinerary views.
- Do not claim activities, prices or availability are live-verified; the itinerary is a planning aid.
