Project Planning and Sprint Schedule

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

Product backlog and sprint plan

Single developer: all tasks were designed, built, deployed and tested by Kumkum Thakur.

Sprint	Epic	User story / task	Priority	Owner	Status
1	Foundation	As a traveller, I can open the home page and enter trip preferences.	High	Kumkum Thakur	Completed
1	Authentication	As a user, I can sign up and sign in securely (Supabase Auth).	High	Kumkum Thakur	Production smoke test passed
2	Trip generation	As a traveller, I can submit destination, dates, interests, budget and pace.	High	Kumkum Thakur	Production smoke test passed
2	Itinerary display	As a traveller, I can read the generated itinerary by day.	High	Kumkum Thakur	Production smoke test passed
3	Persistence	As a user, I can save a trip and see it in My Trips.	High	Kumkum Thakur	Production smoke test passed
3	Editing	As a user, I can reopen a saved trip and edit its preferences.	High	Kumkum Thakur	Production smoke test passed
4	Deployment	As a user, I can access the hosted frontend (Vercel) and backend (Render); CORS configured.	High	Kumkum Thakur	Deployed; smoke tests passed
4	Quality	As a maintainer, I can inspect logs and handle provider / API failures.	High	Kumkum Thakur	Ongoing hardening

Key issues resolved during delivery

- Navigation links behaved as page anchors instead of switching views; fixed by connecting the HomePage onPlanTrip callback and lifting destination state to App level.
- Render build failure resolved by pinning Python 3.11.9 via .python-version.
- Browser CORS error between Vercel and Render resolved by allowing the exact Vercel origin (ALLOWED_ORIGINS).
- Blank page caused by a missing / malformed VITE_SUPABASE_URL fixed by setting production variables and redeploying.
- Saved trips not refreshing and edit form showing defaults fixed by refreshing state after save / update and loading stored values into the planner.

Release acceptance criteria

Sign-in works; valid trip preferences can be submitted; a response is rendered; trips can be saved, listed, edited and retained after refresh; the deployed frontend can reach the backend; no secrets are committed.

Estimation note

Story points and calendar sprint dates were not tracked for this project, so none are stated.
