Functional Features Included in the Solution

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

Feature inventory

No.	Functional feature	User value	Verification status
1	Sign up / sign in (Supabase Auth)	Access personal trip-planning features	Passed in production smoke test
2	Trip preference input and validation	Specify destination and travel constraints	Passed as part of generation flow
3	AI itinerary generation request (FastAPI + Groq)	Generate a plan from submitted preferences	Passed in production smoke test
4	Day-wise itinerary display	Review activities in a structured format	Passed as part of generation flow
5	Save a trip	Keep an itinerary for later	Passed in production smoke test
6	My Trips listing	Find saved journeys	Passed in production smoke test
7	Edit saved preferences	Modify an existing trip without re-entering all values	Passed in production smoke test
8	Persistence after refresh	Retain saved trip data between visits	Passed in production smoke test
9	Backend health endpoint	Check service availability	Returned healthy
10	Deployment and CORS setup	Connect Vercel frontend to Render API	Production flow working

Evidence and scope note

Ten user and system capabilities were identified from the project workflow and the owner's production smoke tests (all passed, including no critical browser-console errors). These are manual functional checks, not automated test coverage. Cost controls and live travel-data integrations are not part of this version.
