Project Communication Plan

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

Purpose

Communicate the project's objective, workflow, architecture, verified capabilities and known limitations clearly to evaluators and users.

Audience	Key message	Channel / artifact
Evaluator / faculty	Problem, solution, architecture, evidence and limitations	Project report, GitHub repository and live demo
End user	How to enter preferences, generate and save a trip	Website walkthrough
Developer / maintainer	Deployment status, defects and decisions	GitHub issues and README
Maintainer	Environment variables, logs, API health and secrets handling	README and Vercel / Render dashboards

Suggested 2-minute explanation

“I am Kumkum Thakur from LNCTS, RGPV. Trip Genius AI is a travel itinerary planner that I built on my own. A user signs in, enters destination, dates, interests, budget and pace, and requests an itinerary. The React frontend talks to a FastAPI backend, which calls the Groq AI model and returns a day-wise plan. Supabase handles authentication and saves trips, so users can revisit and edit their preferences. The frontend is deployed on Vercel and the backend on Render. The suggestions are planning assistance, so travellers should verify current prices and availability.”

Communication checklist

- Use consistent project naming and show the live URL.
- Explain what is implemented versus future scope.
- Avoid displaying API keys, private user records or personal credentials.
- Cite actual test evidence rather than unsupported performance claims.
