Demonstration of Proposed Features

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

Live demo sequence

Step	Feature	Demonstration action	Expected evidence
1	Landing page	Open https://travel-itinerary-planner-0023-b9jioymcx-kumkum18.vercel.app	Page loads without critical console errors
2	Authentication	Sign in with a demo account	Authenticated view appears
3	Planner	Enter destination, dates, interests, budget and pace	Fields accept valid values; invalid input shows errors
4	Generation	Click the itinerary generation action	Loading state, then itinerary response
5	Itinerary view	Review day-wise results	Content reflects the chosen interests
6	Save	Save the trip	Success state / saved record visible
7	My Trips	Open saved journeys	New trip is listed
8	Edit	Open edit preferences	Previously saved values are restored
9	Persistence	Refresh and revisit My Trips	Saved record remains available

Demo preparation

Use a dedicated demo account and a non-sensitive sample trip. Open the Render /health URL a minute before presenting so the backend is awake. Keep screenshots ready in case an external provider is temporarily unavailable, and do not expose environment variables or personal data on screen.

Personalisation check

To show personalisation, generate two plans for the same destination and dates with different interests (for example adventure and water sports versus culture and local food) and point out how the activities differ.

Evidence to capture

Screenshots of the live planner, generated itinerary, saved trip card, edit form populated with saved values, and the successful backend health response.
