Project Demo Planning

AI/ML and Generative AI Track • Project Documentation

Project	Trip Genius AI (VoyagePlan Travel Planner)	**Date**	26 October 2026
Submitted by	Kumkum Thakur (individual project)	**Hall Ticket No.**	0157CS241131
College	LNCTS	**University**	RGPV

Demo objective

Demonstrate the complete deployed user journey from authentication to itinerary generation, saving, reopening and editing.

Time	Activity	Presenter notes
0:00–0:30	Introduce the problem and solution	Explain how the app reduces manual itinerary organisation.
0:30–1:00	Show sign-in and planner inputs	Point out destination, dates, interests, budget and pace.
1:00–2:00	Generate itinerary	Explain frontend, FastAPI and Groq workflow.
2:00–2:45	Save and open My Trips	Show persistence and the saved journey list.
2:45–3:30	Edit a saved trip	Show that prior values are restored; refresh to confirm persistence.
3:30–4:00	Architecture and deployment	Mention Vercel, Render and Supabase; state limitations.

Pre-demo checklist

- Check the Vercel URL loads.
- Check Render /health returns healthy.
- Sign in to the demo account.
- Prepare a sample destination and dates.
- Confirm Groq is responding (generate once beforehand).
- Confirm a saved sample trip exists or create one.
- Close any secret / configuration pages.
- Prepare fallback screenshots.

Likely evaluator questions

Question	Short answer
Why a separate FastAPI backend?	It centralises validation and keeps the Groq API key off the browser.
Why Supabase?	Managed authentication and PostgreSQL persistence without custom password handling.
How is personalisation achieved?	User preferences are included in the AI request built by the backend.
How does persistence work?	Trips are stored remotely per user and re-fetched, not kept only in browser memory.
Main risks?	AI accuracy, provider availability and cost, data ownership, environment configuration.

Risk and contingency

If generation fails, check Render logs and Groq status, show the architecture and captured evidence, and state clearly that the live provider request failed. Do not present cached or demo output as a successful live AI call.
